Juan Pablo Garcia
Martinez

Platinum award

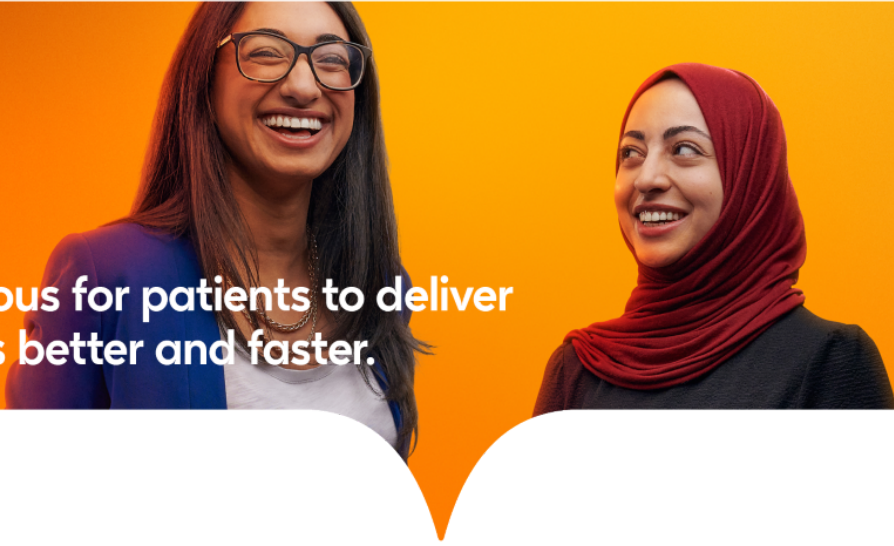

On behalf of the PERLA team, Ted Pellas and Angela Becker, I commend your excellent work designing and building our Imaging Data visualization tool, which compiles multiple sources of data into a powerful, easy-to-use resource. We appreciate your support during development and implementation, openness to feedback, and ability to make near-real time updates. The tool will soon be offered to the whole oncology organization for imaging review. Your work provided immediate value in delivering an interim analysis of PERLA and should have a far-reaching future impact across the oncology portfolio.

Gold award

Thank you for your outstanding and collaborative efforts to develop and implement together with CPMS and external colleagues an R-shiny app to allow visualization and simulation of our model-based meta analysis model in NSCLC. This brings value to our oncology teams that aim to design and analyze trials in patients with lung cancer and has been very much appreciated. Thank you.

Juan Pablo Garcia Martinez

Juan Pablo, thank you for your outstanding work in building a portal for external review of clinical images. You have gone well beyond what was expected in designing and building this from the ground up. We appreciate the incredible job you have done, as well as your kind and thoughtful manner of working with the internal team and external partner, clear understanding of various stakeholder roles, attention to detail, and knack for elegantly developing this within GSK's Microsoft environment! It is a pleasure working with you on this, and this feeling is broadly shared across the team.

Juan Pablo Garcia Martinez

Juan Pablo is an excellent problem solver, and I'd like to nominate him for recognition.

Juan Pablo was able to create a tool that allows for quick visualization of DEXA imaging data on the PRMT5 FTIH study. This has allowed for increased speed of safety data review, for both the site entered datasets, and for data coming from our central vendor. This also has allowed for easy identification of missing data entries, and the team have been able to enact several important edit-checks. Juan Pablo's programming talents and dependability continue to be valuable resources for GSK.

Juan Pablo is often able to envision and deliver a better solution than what was requested. This is just one instance of many, and it is my hope that this is a small token of thanks and well deserved recognition of his continued efforts that go "above and beyond".
